HONORS & FELLOWSHIPS	Quantitative Reasoning Fellowship, New York City College of Technology	2016–2017
	Enhanced Chancellor’s Fellowship, CUNY Graduate Center	2012–present
	Graduate Student Fellow, The Tobin Project (Cambridge, MA)	2015–2016
	Research Praxis Fellowship, CUNY Advanced Research Collaborative	2015
	Hyman P. Minsky Summer Seminar Fellow, Levy Economics Institute (Bard College)	2014
	Scholarship, Institute for New Economic Thinking (INET)	2013
	SVU Josef Hašek Award, Czechoslovak Society of Arts and Sciences	2007
	Dean’s List, University of Chicago	2003–2006
INVITED TALKS	World Finance Conference	Jul 2017
	Eastern Economics Association Conference	Feb 2017
	Applied Economics Seminar, CUNY Graduate Center	2016
	Tobin Graduate Student Forum, The Tobin Project (Cambridge, MA)	2015
EXPERIENCE	<i>Teaching</i>	
	<i>Lecturer:</i> Mathematical Economics (6 sections), Brooklyn College	2014–2016
	<i>Volunteer Tutor:</i> Bridge to Enter Advanced Mathematics (New York, NY)	2016–2017
	<i>Teaching Assistant:</i> Principles of Macroeconomics, Brooklyn College	Fall 2013
	<i>Research</i>	
	<i>Assistant:</i> Profs. Thom Thurston and George Vachadze, CUNY Graduate Center	2012–2013

THESIS ABSTRACT	Paper I: “A Network Model of Wealth Inequality and Financial Instability” [Job Market Paper]	

We propose a theoretical network model for understanding the relationship between wealth inequality and financial instability. Financial assets link individuals to form a network. Its topology varies with the level of wealth inequality or total wealth and determines network stability in the event of an income shock. Simulations demonstrate that increasing wealth inequality, measured by the

skewness of the financial network’s degree distribution, makes the network less stable, measured by the share of individuals failing financially. Aggregate wealth has an inverted U-shaped effect on the model’s network stability. Implications of the theoretical model are tested empirically on long-run panel data for nine countries with a reduced form, two-way fixed effects model. Estimates suggest that increasing wealth inequality, in an economy with high levels of aggregate wealth as measured by the wealth-income ratio, significantly increases the likelihood of financial crises, particularly stock market crashes.

Paper II: “Instability, Credit, and Inequality in the United States Since 1913”

In a methodological application of the cointegrated VAR model, we test multiple hypotheses concerning long-run relationships between inequality, credit, and financial instability in the United States since 1913. The central role of abnormal credit growth in financial crises is well defined (e.g. Kindleberger and Minsky), thus we test if this relationship holds statistically and then expand the model to test if either income or wealth inequality is also a long-run determinant of credit growth. A breadth of data is applied and competing VAR systems tested to bolster the apparent theoretical foundation of any statistical results.

Paper III: “Re-examining the Inequality and Growth Relationship: Evidence from CPS Reported Weekly Earnings Data”

We propose an identification strategy that exploits reported household earnings in monthly CPS Basic surveys to study the relationship between inequality and growth. We study between-industry and occupation variation in earnings inequality and its subsequent impact on between-industry or occupation production growth rates.
